

#### Job Title

Electronics Design Engineer – Fresher / Entry Level

#### About the Role

We are looking for a fresher to join our team as an Electronics Design Engineer. You will support the design, testing, and development of electronic circuits and hardware systems under the guidance of senior engineers.

#### Responsibilities

- Assist in designing and testing basic electronic circuits.
- Support PCB layout and schematic design.
- Work with simulation tools for circuit validation.
- Document test results and technical details.
- Collaborate with the hardware and embedded systems team.
- Learn and apply industry practices for electronic design.

#### What We're Looking For

- Basic understanding of electronic components and circuits.
- Familiarity with PCB design tools (like KiCad, Altium, or OrCAD).
- Strong interest in hardware design and testing.
- Problem-solving and logical thinking skills.
- Willingness to learn and work in a team environment.

#### Nice to Have

- Internship or academic project in circuit/PCB design.
- Exposure to microcontrollers or embedded systems.
- Familiarity with simulation software (Proteus, LTSpice, Multisim).
- Basic soldering and hardware debugging skills.

#### Qualifications

- Bachelor's degree in Electronics, Electrical, or related field.
- Fresh graduates or candidates with up to 1 year of experience can apply.
