PROJECTS

Hand Gesture Controlled Robot

A hand gesture-controlled robot using Arduino Nano and Arduino Uno is a project where a robot moves based on the user's hand gestures. The system typically uses an Accelerometer (like MPU6050 or ADXL345) attached to a glove worn on the user's hand. This sensor detects the tilt or orientation of the hand and sends this data to the Arduino Nano, which processes the signals and transmits commands wirelessly (usually via RF modules or Bluetooth) to the Arduino Uno on the robot.
