ABOUT ME

I am a Computer Science Engineering student specializing in Artificial Intelligence and Machine Learning (AIML), with a strong passion for **Cloud Computing and its applications** in intelligent systems. My academic background provides a solid foundation in machine learning, data science, and AI model development, which I aim to scale and deploy using cloud platforms. I **have foundational knowledge of AWS and Microsoft Azure ..** Additionally, I possess introductory skills in UI/UX design, allowing me to contribute to both the technical and user-experience aspects of application development. I am enthusiastic about building cloud-powered, AI-driven solutions that are scalable, efficient, and impactful.

EDUCATION

2022 - 2026   **Bachelor of Engineering - Computer Science specialization in (AI&ML)**

J S S ACADEMY OF TECHNICAL EDUCATION,
BENGALURU

CGPA : 8.00

PROJECTS

Smart Traffic Management System

This project aims to develop a Smart Traffic Management System to address the growing challenges of urban traffic. By implementing intelligent algorithms and connected technologies, the system will strive to minimize delays, improve travel times, and contribute to a more efficient transportation network.

SKILLS

- Python
- SQL
- AWS
- Figma
- Microsoft Azure(Foundation)
- C and C++
- Computer Networks
- Proficiency

CERTIFICATIONS

- **Introduction Network Routing**
- **Supervised Machine Learning: Regression and Classification**
- **The Complete Sql**
- **Digital Image Processing**
